

Deep Learning and Software Engineering

Template for Milestone 1

1.- Context

The DL system you will deploy will be one part of a bigger software system. In this section, you have to provide the requirements specification of the software system where the DL model will be embedded.

2.- High-Level Description of the Model

The chosen model needs to be justified. This includes providing a brief description of other models that have been considered to do the assignment and an explanation of why this model has been chosen.

3.- Model Card

As described in the documentation available in Moodle.

4.- Data Card

As described in the documentation available in Moodle.
